

Logging onto a local machine with WinSuite installed but connected to the domain

Versions applicable to this function: -

- WinSuite 2000 3.5
 - WinSuite 2000 3.51
-
- Ensure that your client machine is connected to your domain.
 - Take the network cable out of the back of the machine.
 - Log onto the machine as a user.
 - You will get a message box appear saying "The network is unavailable you may log on locally as Administrator". Press Enter to get rid of the message box.
 - Press Alt + W together to allow you to enter the Administrator username & password.
 - Enter the Administrator Username & Password and log in to the machine.
 - You will now be logged onto the local machine.
