

Manual Uninstall of WinSuite 2000 2.x 3.x from NT/2K/XP clients

1. Logon to the WinSuite 2000/WinSuite 3.51 Client computer as a member of the Domain Admins Global Group (or see Caveat 1 above)
2. Click Start | Run and type Regedit.exe, click OK
3. Navigate (in the left pane) to HKEY_LOCAL_MACHINE\SOFTWARE\Dacoll\WinSuite
4. Double click the Userinit entry in the right pane, from the resulting Edit String dialog, select (highlight) and COPY all of the Value data, click Cancel (see **Note below)
5. Navigate (in the left pane) to HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon
6. Double click the Userinit entry in the right pane, from the resulting Edit String dialog, highlight the current Value data, and PASTE in the new Value data
7. Still in HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon, there will be an entry in the right pane for GinaDLL
8. Select (highlight) the GinaDLL entry
9. Press the Delete key on the keyboard
10. Close Regedit.exe
11. Restart the computer
12. The native Windows logon should now appear
13. Logon as a member of the Domain Admins Global Group
14. Click Start | Run and type:
 smtreg.exe -remove
 click OK
15. Open Windows Explorer
16. Go to C:\Program Files\WinSuite
17. Select (highlight) the C:\Program Files\WinSuite folder (*not* the C:\Program Files folder!)
18. Press the Delete key on the keyboard
19. Empty the Recycle Bin
20. Click Start | Run and type Regedit.exe, click OK
21. Navigate (in the left pane) to HKEY_LOCAL_MACHINE\SOFTWARE\Dacoll
22. Select (highlight) the Dacoll Folder.
23. Press the Delete key on the keyboard
24. Close Regedit.exe

****Note:** The Userinit Value data, should be *something* like (this example is from an XP computer):

C:\WINDOWS\system32\userinit.exe,

(yes, that is a comma at the end).

WinSuite 2000/WinSuite 3.51 Client software is now *mostly* removed from that NT/2K/XP computer.
